

WHY work with Fenstür

Design

- Canada's **most energy efficient** wooden doors and windows
- Flexible designs and finishing options
- Modern designs produced with **state-of-the-art** technology and machinery
- Wide product range - we also manufacture interior doors

Craftsmanship

- Manufactured on **Vancouver Island**
- Short manufacturing and shipping times
- Three generations of family experience

Quality

- All products are manufactured, assembled, and painted in-house
- Great warranty
- High quality, locally sourced woods
- **No exposed finger joints** – solid laminated timber

High manufacturing standards reduce maintenance

Material Preparation

- We use specially selected old-growth timber grown in cold and wet climates
- Graded for a higher proportion of **heartwood**, the most durable and desirable part of a tree
- Engineered door and window components increase stability, reduce knots, and minimize pitch bleed

Technology and Machining

- High quality, technologically advanced machine processes result in a **smoother timber surface** and **better joint strength**
- Improved component design, using a slight slope – especially in the horizontal sections of the window – prevent pooling water, water penetration, and rot in vulnerable areas
- Drained and vented glass cavities extend the glazing unit service life
- Multiple gaskets keep windows and doors air tight, preventing drafts

Finishing

- Rounded corners, rather than sharp edges, improve paint adhesion
- End-grain sealants are used in window bottoms and joints to **prevent water absorption** in vulnerable sections
- Industrial quality paints reduce maintenance requirements and make maintenance easy. **No more sanding or scraping paint ever again!**
- Factory applied paint provides better protection than job-site applied finishes, and protects the window in areas not accessible after assembly
